Student Name: Stetson Reger

Team members:
 1.- _____ 2.- _____
 3.- _____ 4.- _____

Instructor: Stetson Reger

Acceleration Through an Atwood Machine

Record the masses of each trial, and record the slope of the velocity curve. Make one printout per group to be handed in, and note down the section title. Be sure to write down the units.

Trial 1: m_1 : 0.250 Kg m_2 : 0.260 Kg Slope: 0.0544 Plot(v vs. t):
 Trial 2: m_1 : 0.250 Kg m_2 : 0.270 Kg Slope: 0.151 Plot(v vs. t):
 Trial 3: m_1 : 0.250 Kg m_2 : 0.280 Kg Slope: 0.418 Plot(v vs. t):

Static Friction on a Horizontal Surface

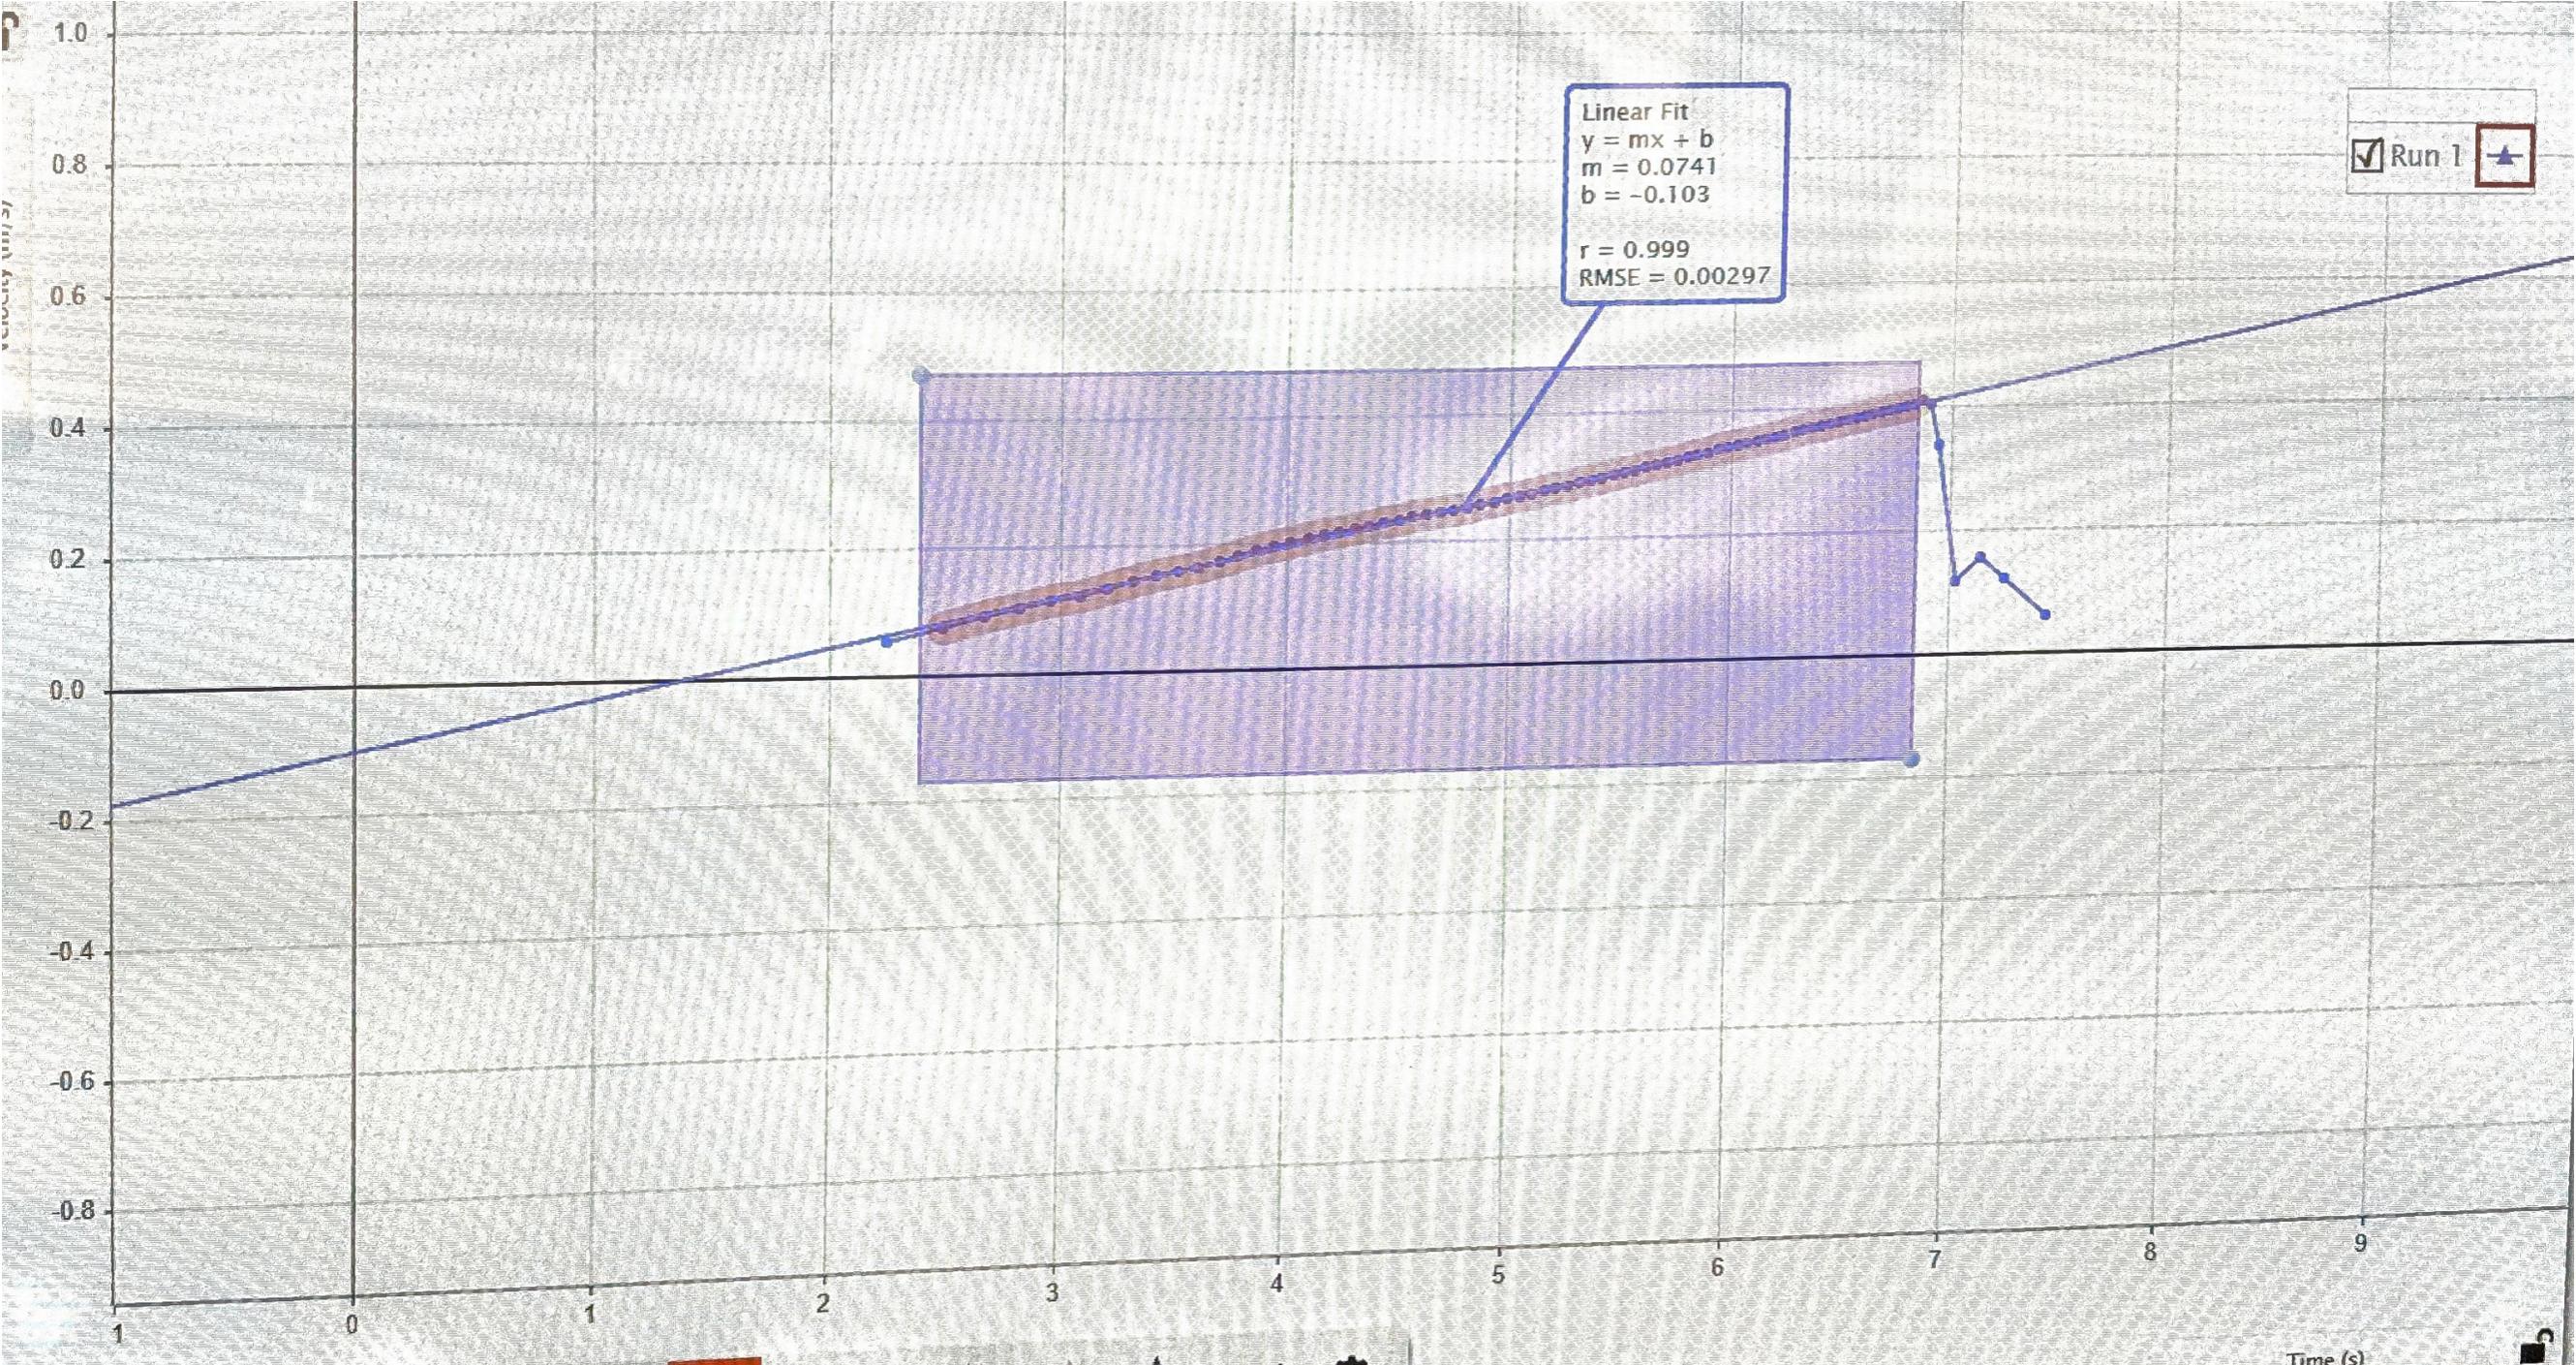

Record the type of surface and the maximum force applied before the 2 kg mass started to move. Make one printout per group to be handed in, and note down the section title along with corresponding surface. Include units.

Surface: <u>Wood on Table</u>	Surface: <u>Felt on ^{Table} Wood</u>
Maximum force: <u>-9.47N</u>	Maximum force: <u>-5.20N</u>
Plot (F vs. t): <input type="checkbox"/>	Plot (F vs. t): <input type="checkbox"/>

Kinetic Friction on an Inclined Surface

Record the mass of the wooden block, the inclination angle and the slope of the velocity curve. Make one printout per group to be handed in, and note down the section title. Be sure to write down the units.

m_{block} : 232.6g
 Angle: 20°
 Slope: 0.0978
 Plot (v vs. t):

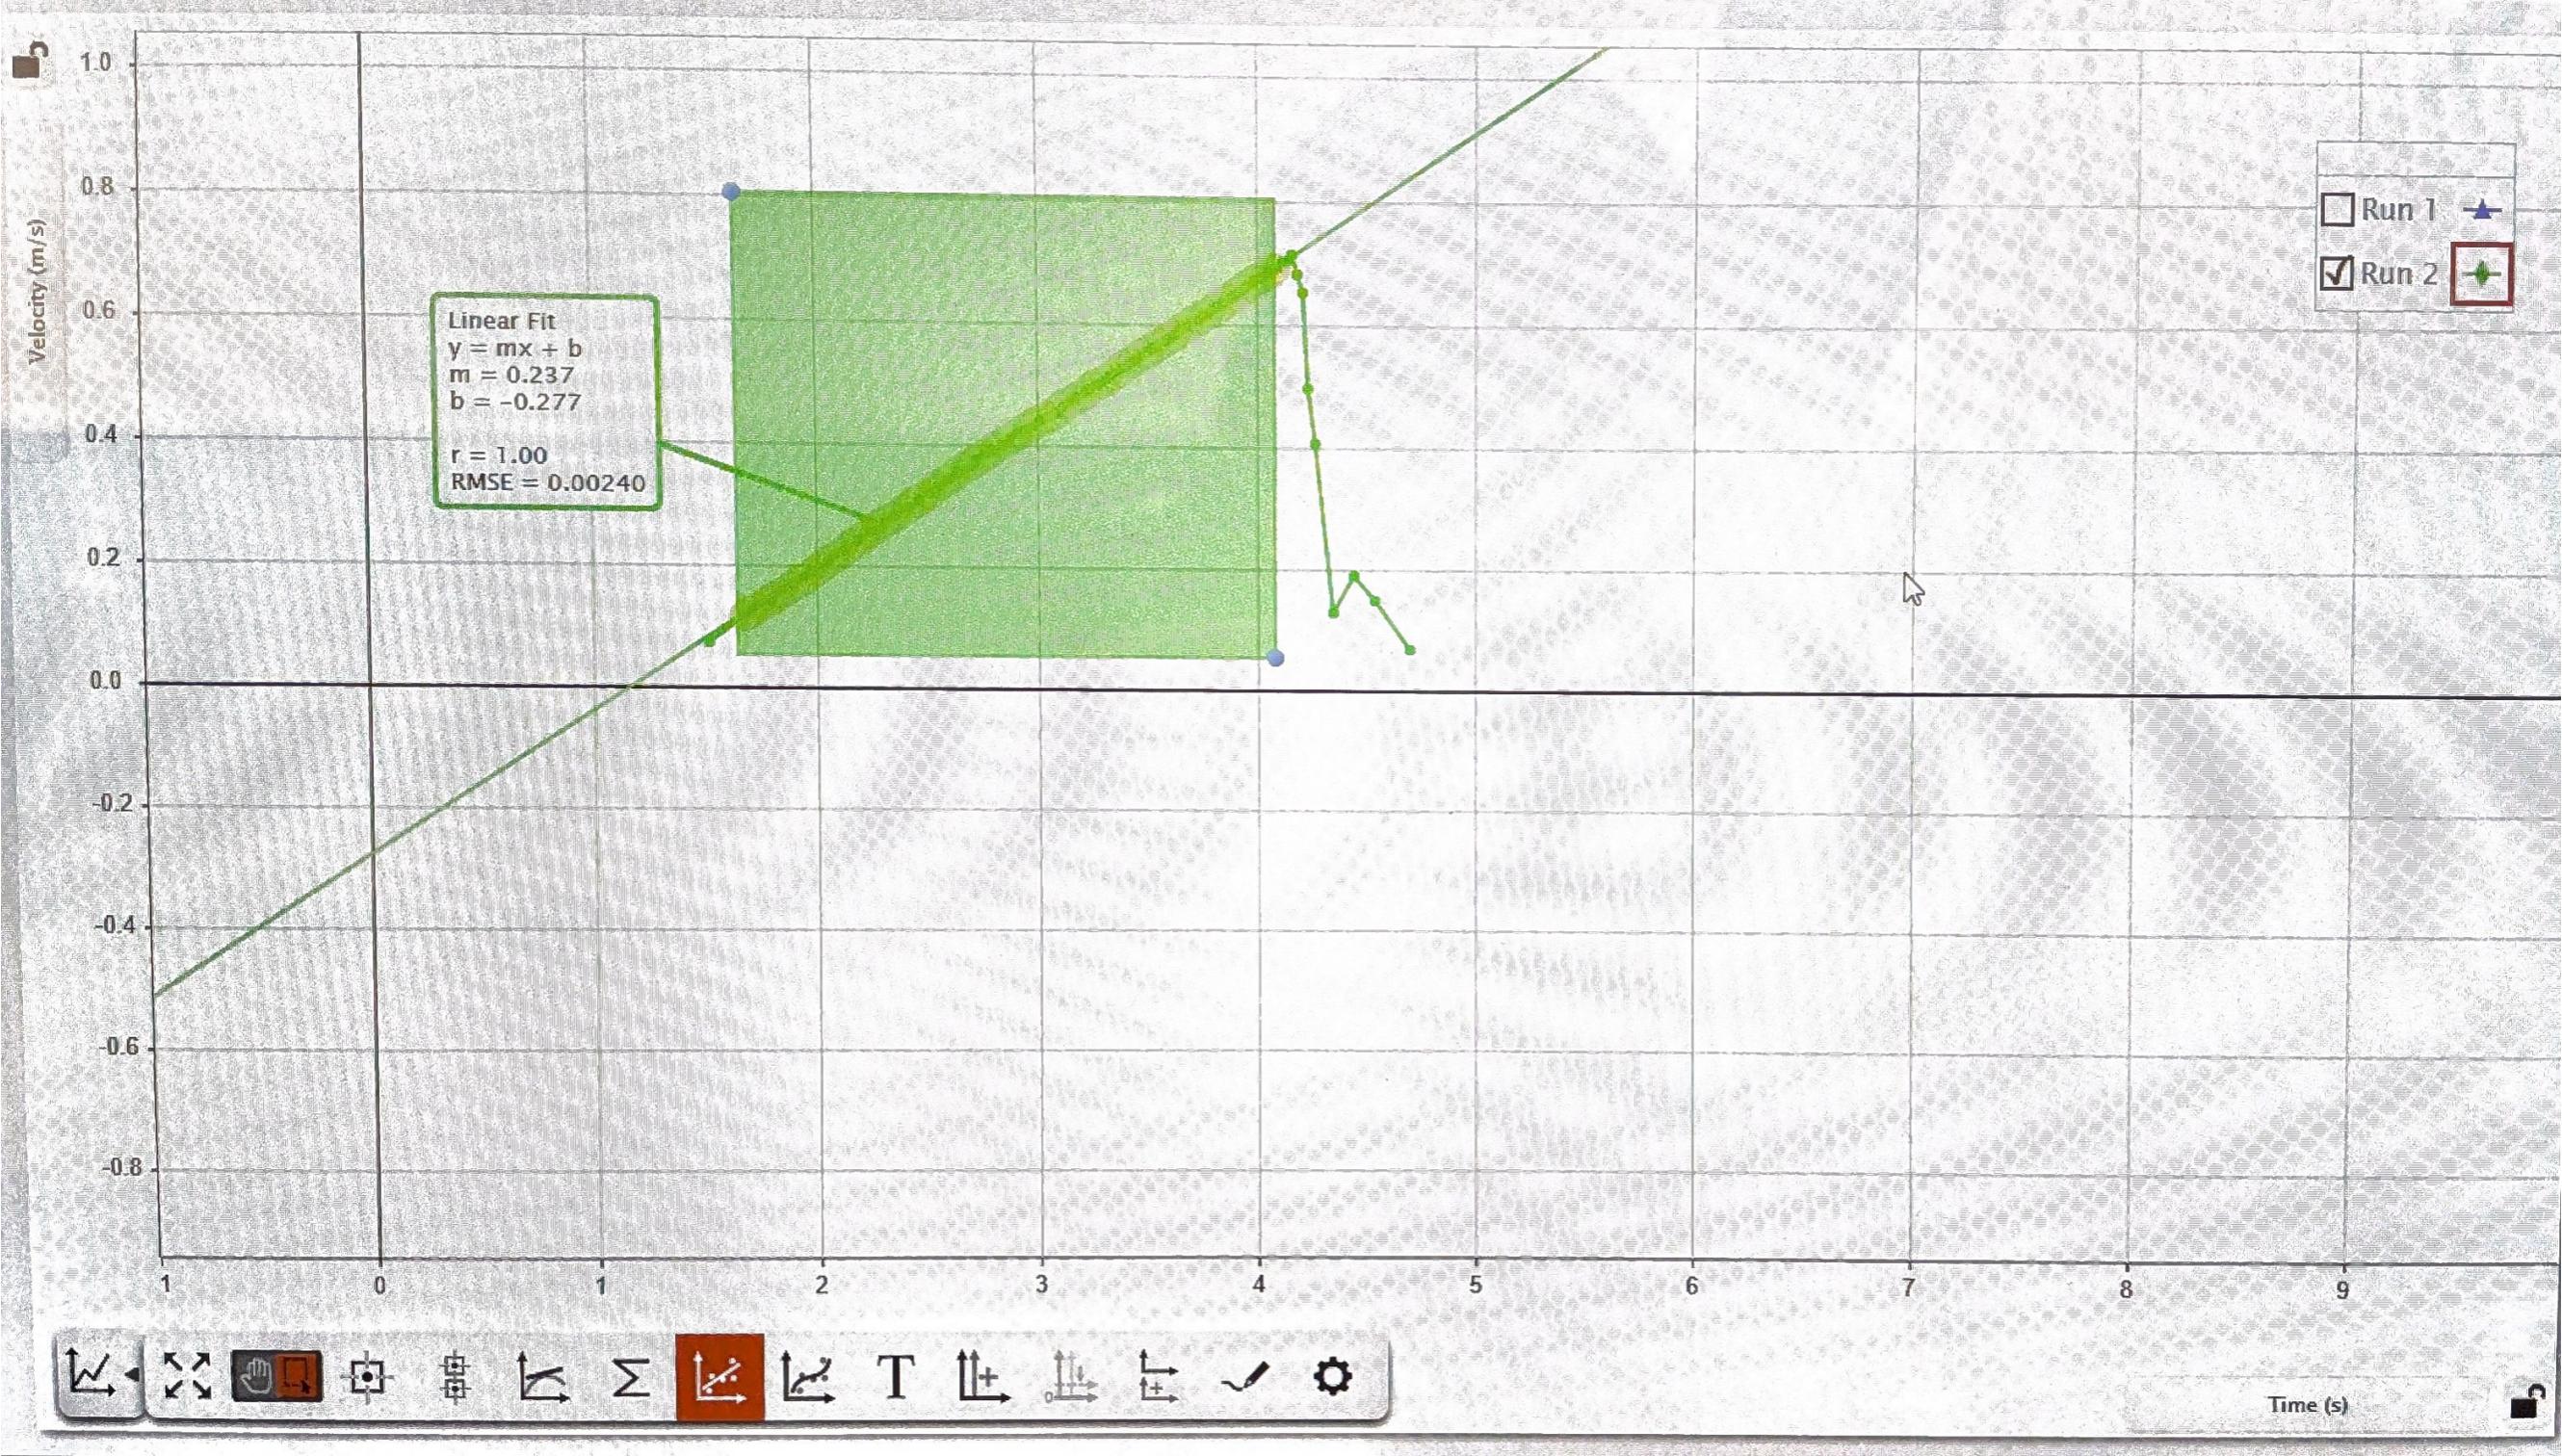

Run 1

Linear Fit
 $y = mx + b$
 $m = 0.0741$
 $b = -0.103$
 $r = 0.999$
RMSE = 0.00297

Time (s)

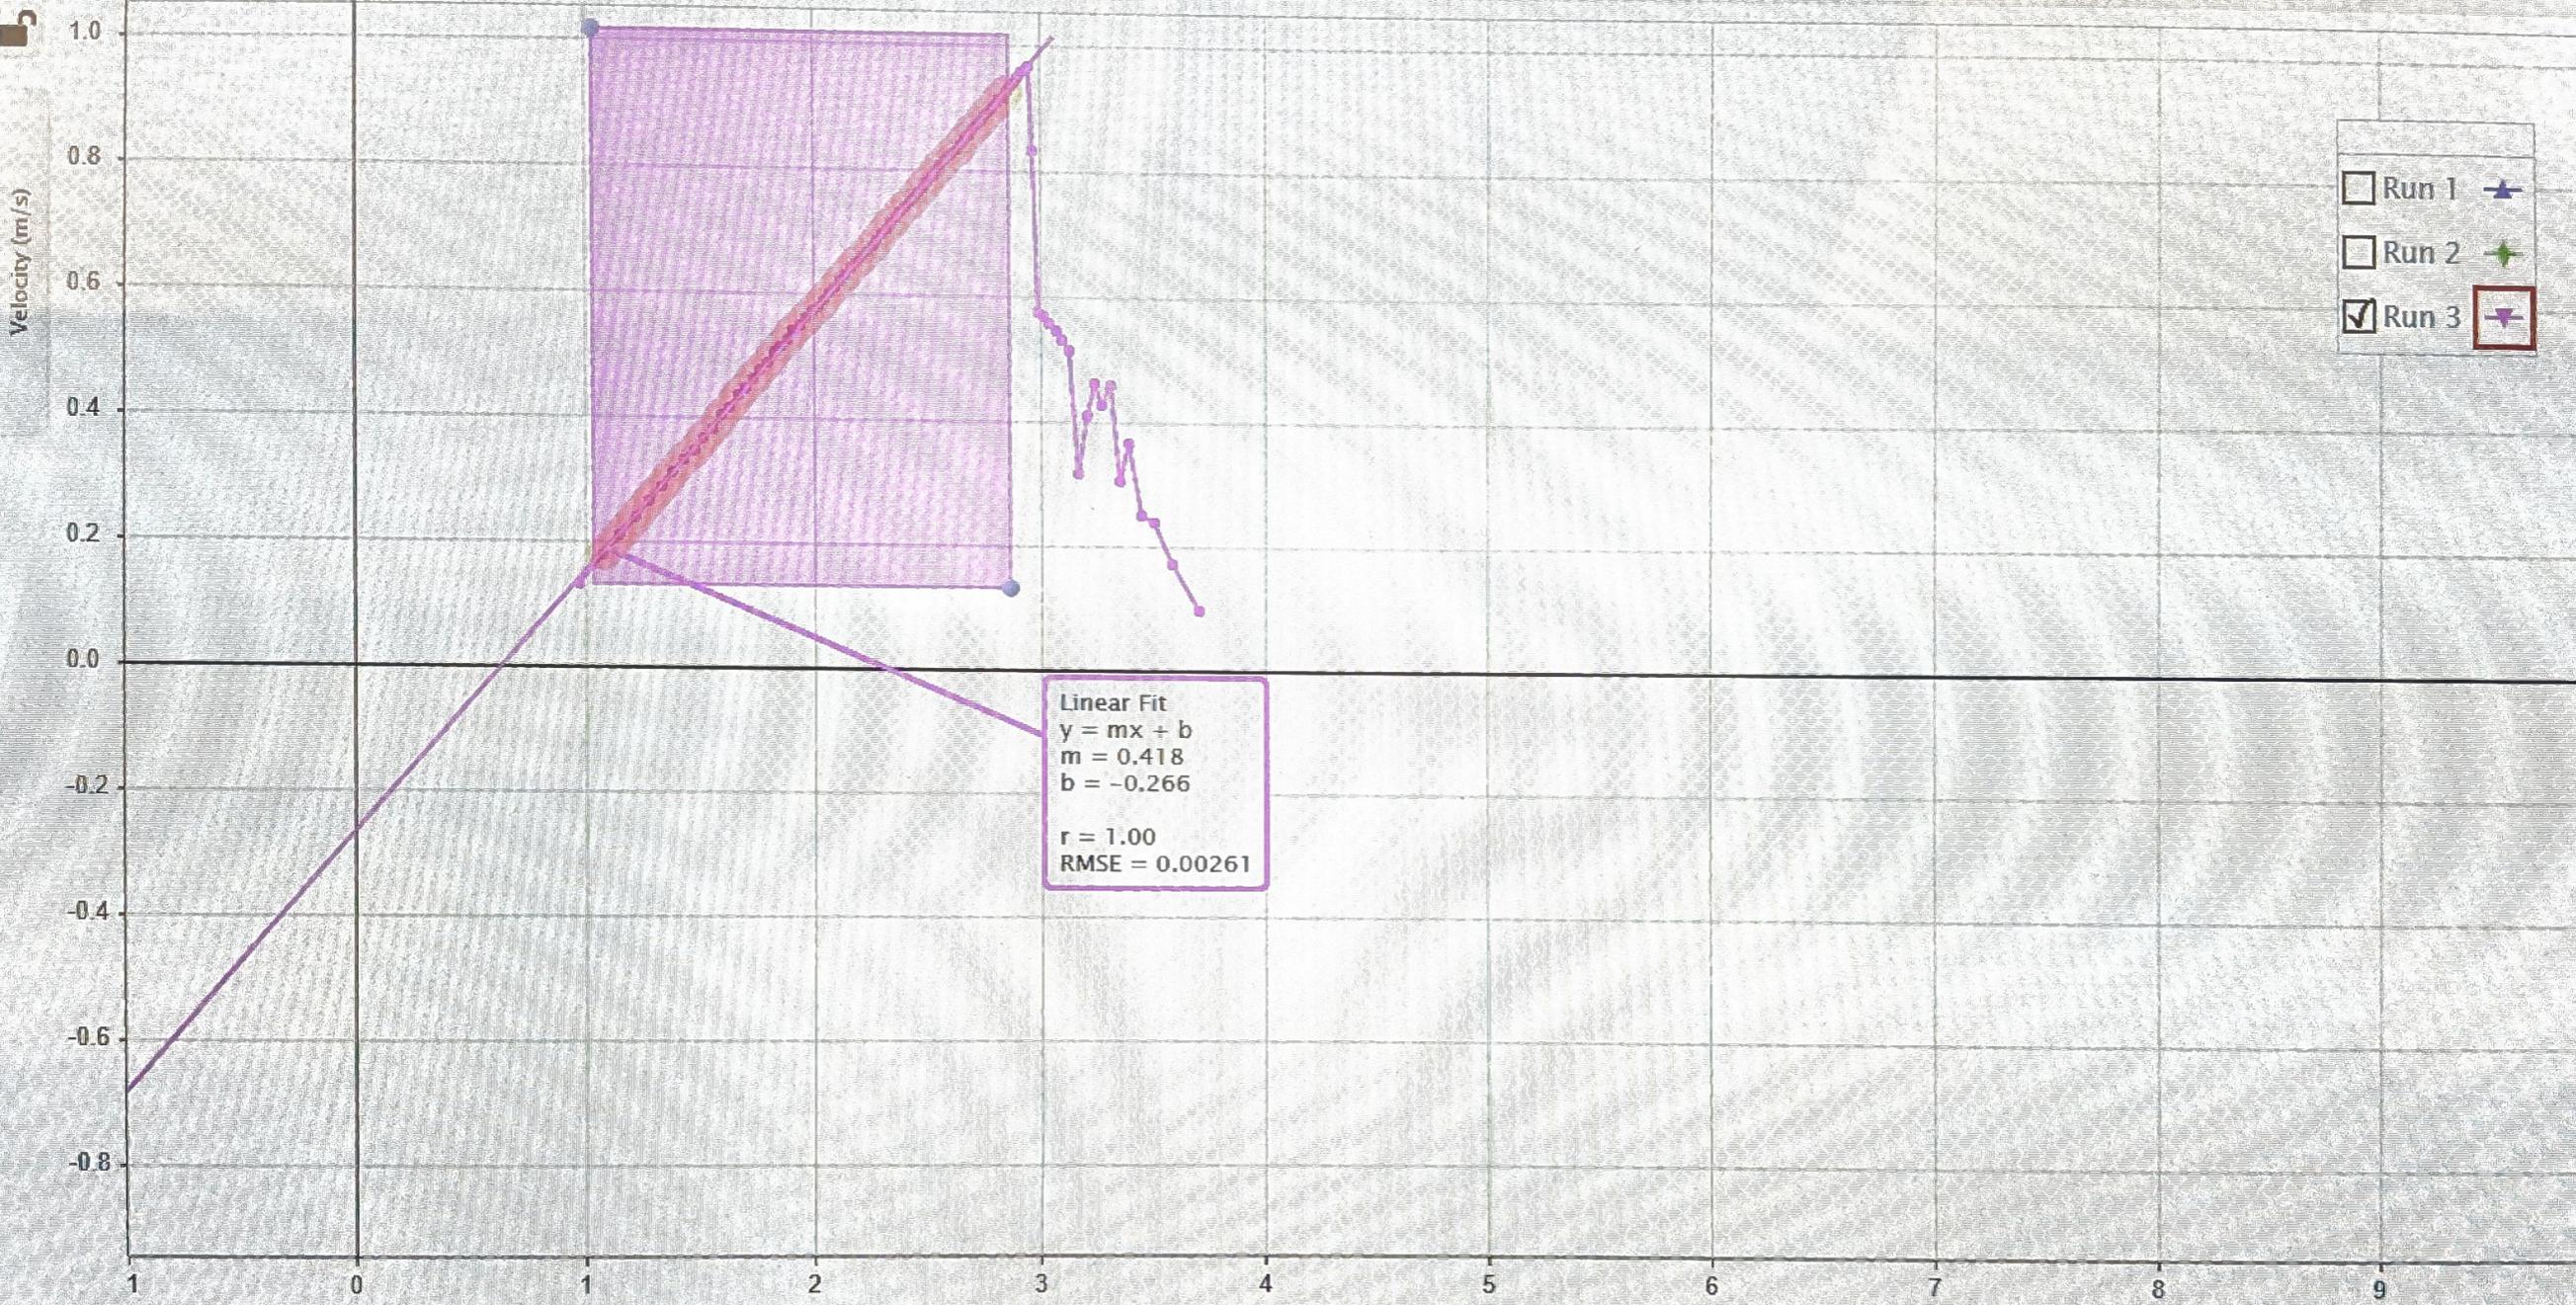

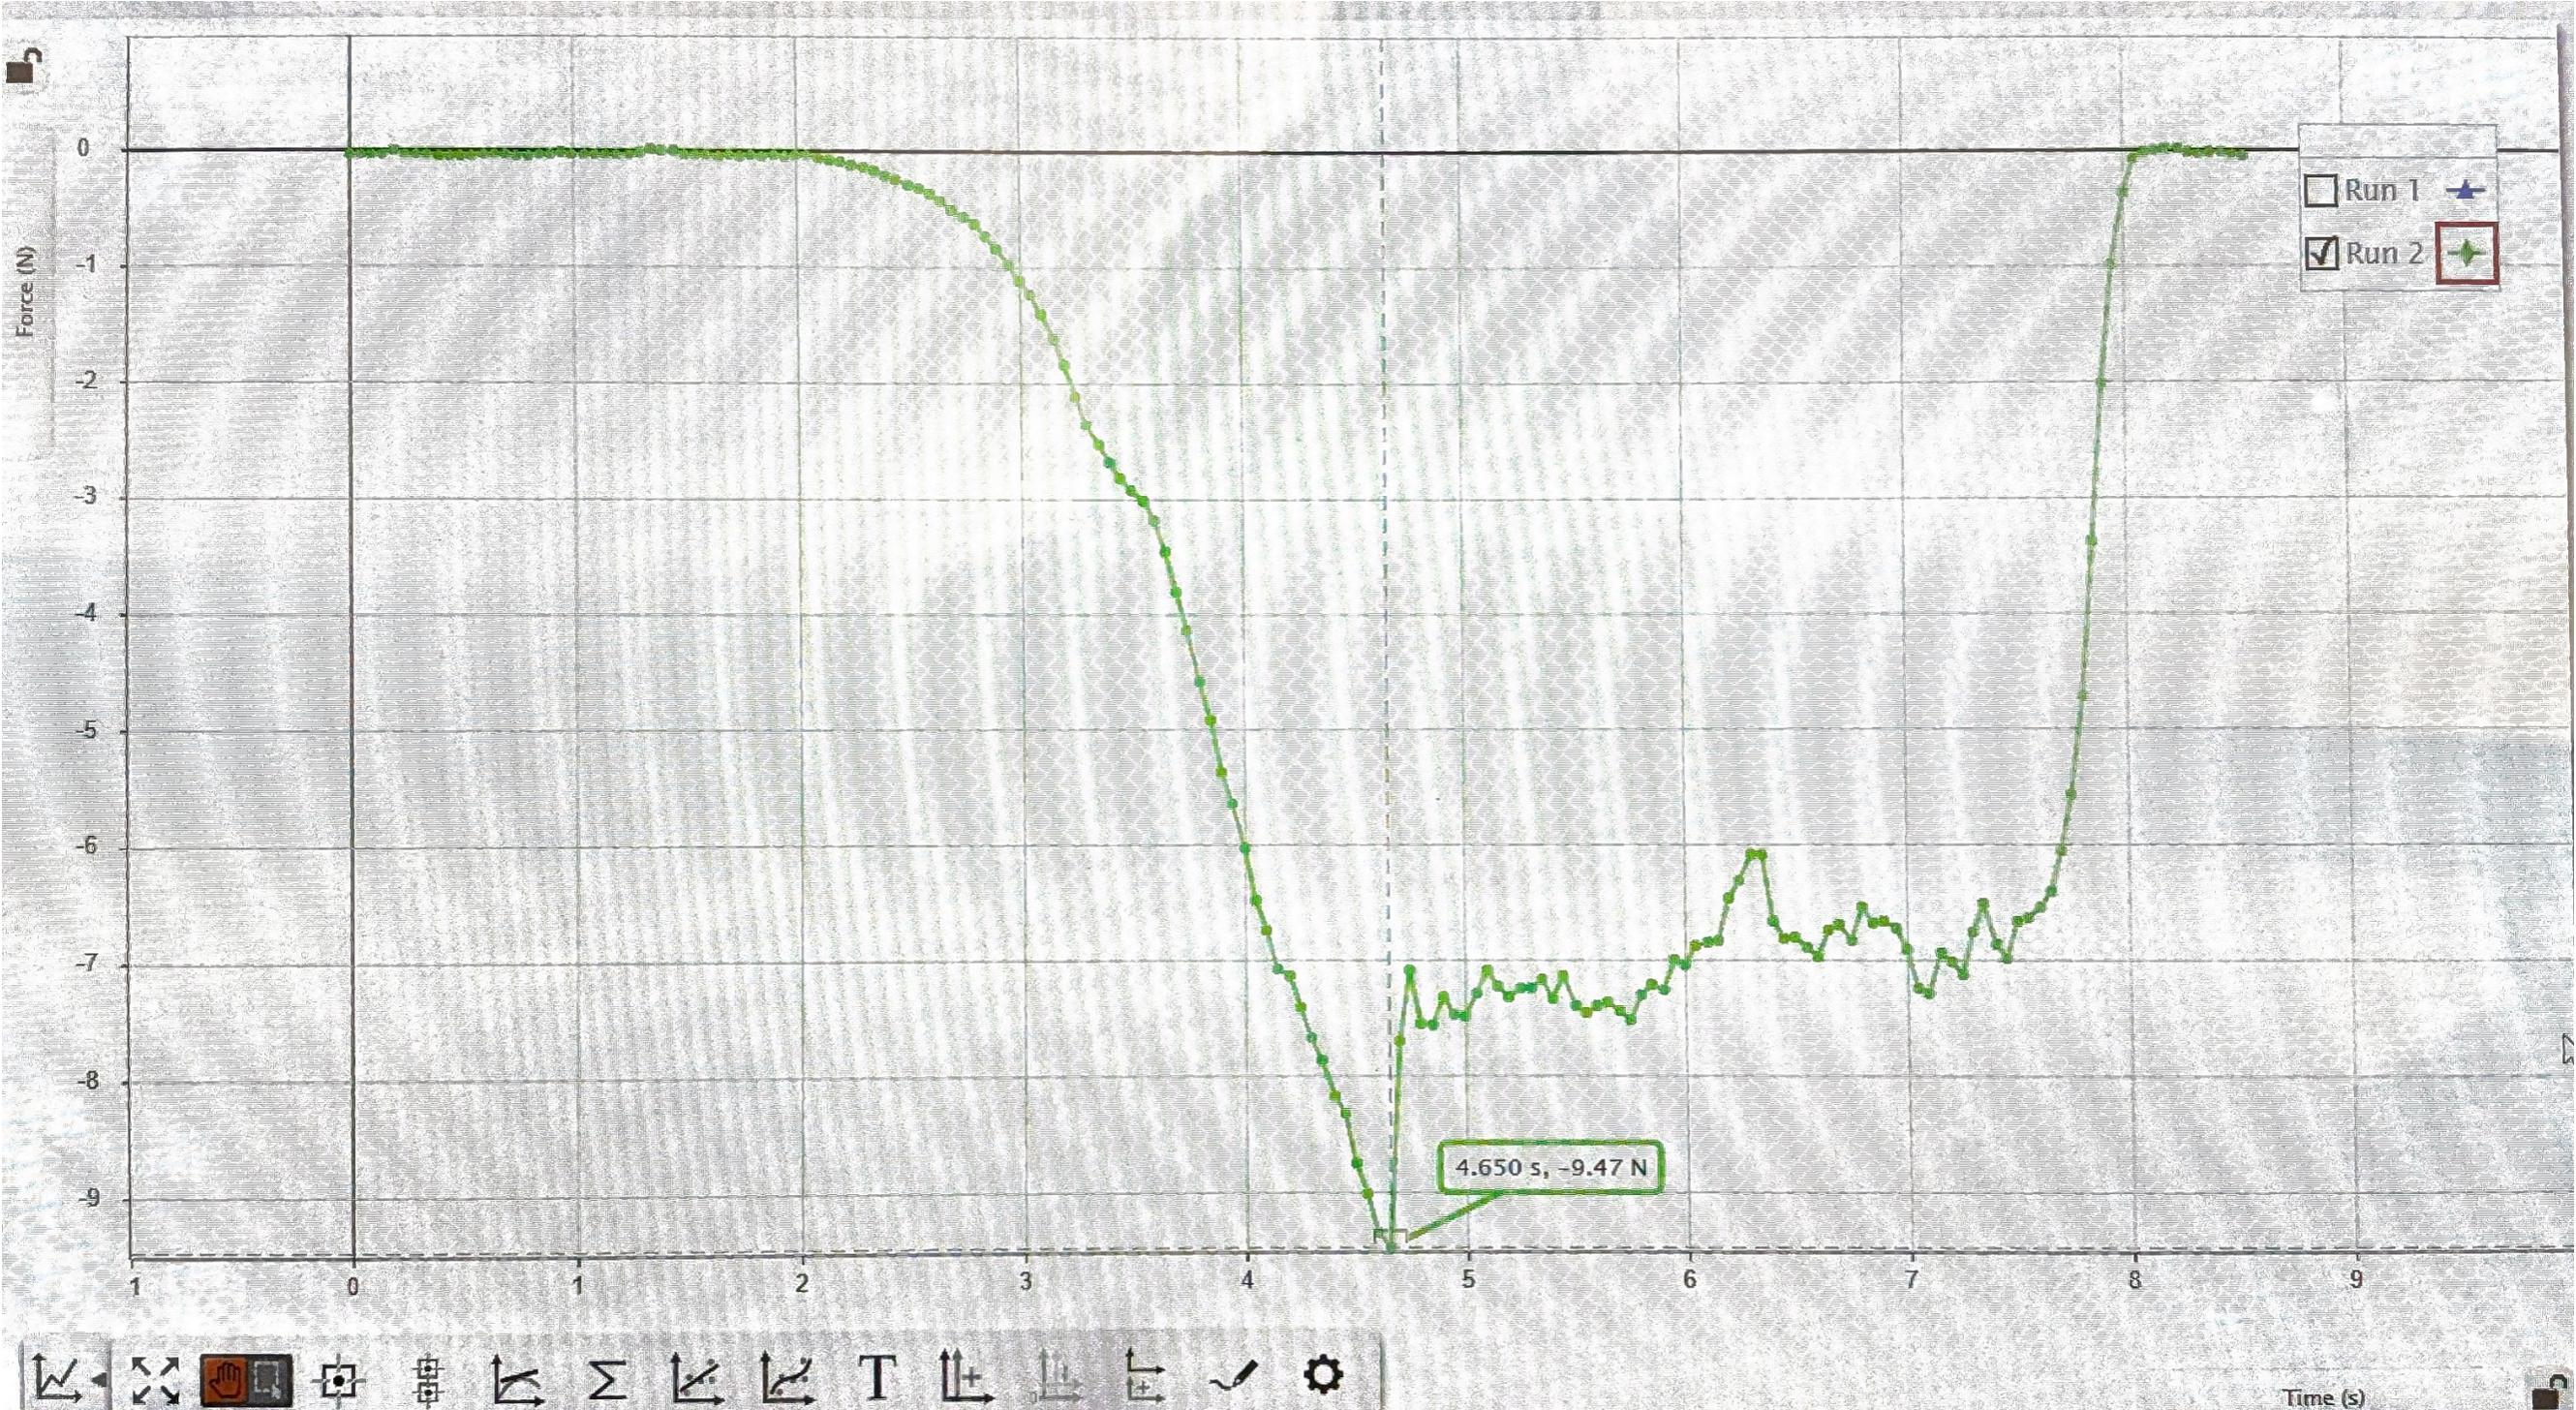

Linear Fit
 $y = mx + b$
 $m = 0.237$
 $b = -0.277$
 $r = 1.00$
RMSE = 0.00240

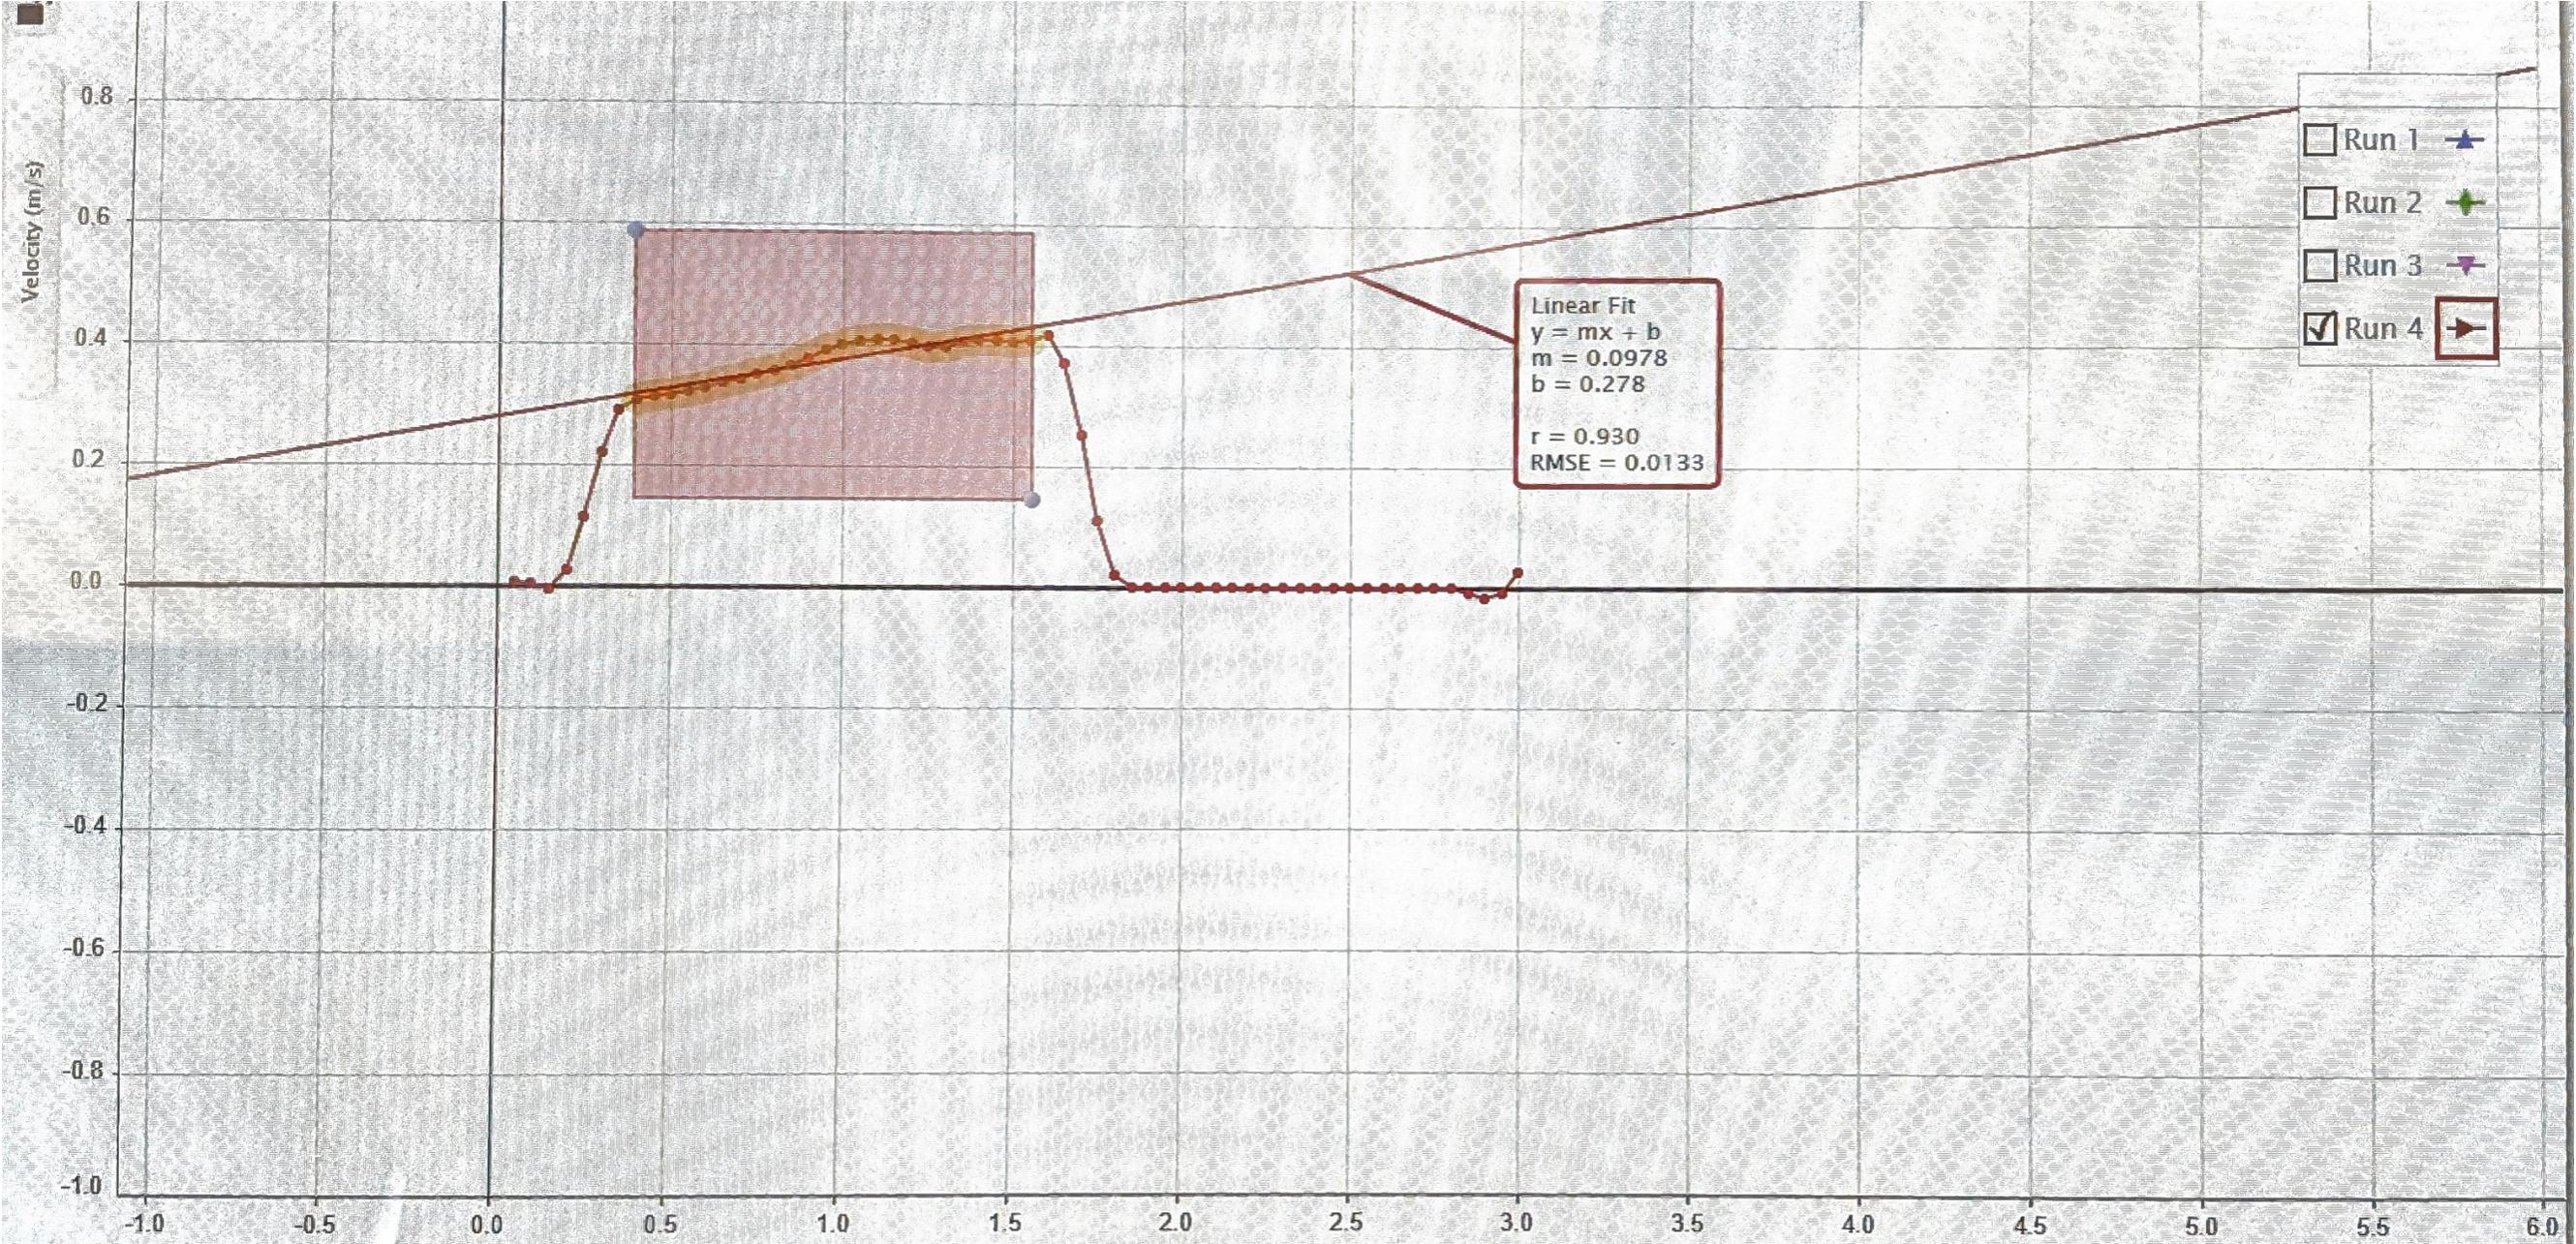

- Run 1
- Run 2

Time (s)
